SYNTHETIC TEST DOCUMENT - NOT CLINICAL EVIDENCE

Source review practice: eligibility

Eligible participants were aged 18 to 65 years.

Inclusion required newly diagnosed non-APL acute myeloid leukemia.

Inclusion required specialist-confirmed fitness for intensive treatment.

These invented criteria demonstrate how patient parameters can differ.

They are not a treatment protocol and must not guide patient care.

Source review practice: past results

In this fabricated test dataset, the complete remission count was

12 of 20 in group A and 8 of 20 in group B at 6 months.

The arms are hypothetical intensive strategies A and B.

No uncertainty interval, randomization or safety data is supplied.

The results are invented for interface testing, not clinical evidence.

No treatment effect or individual benefit can be inferred.
